Web

I grew up with an interest in the field of Cyber Security. This curiosity led me to the field of Web security in the field of Cyber Security. Learning advanced Linux for my future goals Besides, I am also very assertive about researching and learning about existing tools and Web Security vulnerabilities. I also created the ossdocs project, which I built inspired by the Linux kernel. I am excited to achieve great success by bringing it to life.

WORK EXPERIENCE

HackerOne

August 2024

San Francisco

- Owasp Top Ten
- API Security
- Web Penetration testing tools

EDUCATION

University Diploma in French Studies

University of Rouen Normandy

September 2024

French, Rouen

I aim to start my undergraduate studies in Computer Science after reaching the required level in A1 French language education, which I plan to start in January 2025.

Electronic Automation and technology associate degree

Kayseri University

September 2020

Türkiye, Kayseri

- Basic Arduino usage and coding was learned.
- Basic electronic circuit elements and working principles were learned.
- Basic Communication technology was learned.
- Basic Digital electronics learned.

PROJECTS

ossdocs

July 2024

Inspired by the Linux Kernel, I aim to establish a large-scale, non-profit foundation similar to OWASP. This foundation will focus on promoting cybersecurity and developing open-source security tools. While I've been consulting with individuals in my own country, I envision this project expanding to encompass multiple countries sharing a common cultural heritage but with diverse languages. I plan to transform this idea into a tangible project soon and reach out to universities in relevant countries.
